Summary

Experienced Software Engineer with a solid understanding of full-stack development, cloud computing, and AI solutions. Passionate about designing scalable applications, leading engineering teams, and optimizing system performance. Adept at emerging technologies, automation, and best coding practices.

Skills

- Java, Python, JavaScript, SQL
- Cloud Computing (AWS, Azure, GCP)
- Microservices & Scalable Architectures
- DevOps & CI/CD Pipelines
- AI & Machine Learning Applications
- Java Application Development

Experience

05/2020 - Present

Software Engineer, Google (2016 - 2020), Microsoft (2020 - Present)

- Automated multiple processes within Cloud environments alongside DevOps engineers.
- Developed and implemented Java applications using Spring, Hibernate, and Struts frameworks.
- Designed deep learning algorithms and neural networks to improve automated systems.
- Integrated AI capabilities into existing software applications.

06/2015 - 05/2016

Software Developer Intern, JP Morgan, New Delhi, India

- Assisted in developing enterprise banking applications using Java and Python.
- Contributed to automation scripts, reducing manual deployment errors by 40%.
- Worked on financial security solutions, improving transaction safety protocols.
- Built machine learning models to detect fraudulent transactions and enhance cybersecurity.

Education and Training

05/2015

B.Tech, Computer Engineering

Pandit Deendayal Energy University, Gandhinagar, India

Certifications

- AWS Certified Solutions Architect
- Google Professional Cloud Developer
- AI & ML Enthusiast | Open-Source Contributor
